CAREER

Full Stack Engineer - Emlak24 (Germany/Remote) March 2026 - September 2026

- **Core Backend Architecture & Data Modeling:** Architected modular RESTful services **using NestJS** and **TypeScript**, structuring normalized **PostgreSQL** relational schemas with Prisma ORM to enforce strict transaction atomicity, DTO validation, and clean domain isolation.
- **Third-Party Valuation & Data Enrichment:** Integrated **Endeksa API** to automate property valuation workflows, engineering resilient HTTP service layers with fallback mechanisms and error handling to enrich listing datasets without degrading core API latency.
- **Event-Driven Alerting & Traffic Control:** Built a real-time notification pipeline backed by **Redis** sliding-window rate limiting, filtering high-priority valuation signals and governing push alert frequency across user membership tiers to eliminate alert fatigue.
- **AI-Assisted Search & Lead Routing:** Integrated conversational LLM tool and function calling to translate unstructured natural language search prompts into structured **database query filters,** automating dynamic property matching and lead dispatch.

Full Stack Engineer - Pro Sicht (Germany/ Remote) October 2025 - March 2026

- **Localized AI Video Workflows:** Architected and deployed a self-hosted AI video generation pipeline utilizing **ComfyUI and LTX models,** establishing zero-cloud-dependency, privacy-focused media generation workflows.
- **Enterprise Frontend Architecture**: Architected and deployed the company's flagship **B2B platform** from the ground up using **Vue 3** and **Nuxt 3**. Adhered to **"less code" principles** to ensure a highly maintainable, reactive, and scalable **SSR/SSG codebase**.
- **Premium UI/UX & Data Visualization**: Developed **Stripe-tier interfaces** via **Tailwind CSS**, featuring dynamic Bento Grids, **GSAP-powered** interactive network topologies, and 3D SVG wireframe globes seamlessly integrated into Vue components.
- **Database Architecture & Admin Ecosystem**: Architected a robust **PostgreSQL** database infrastructure from the ground up, engineering complex **raw SQL schemas** to ensure high performance and data integrity. Developed a secure, comprehensive Admin Panel to centralize system management and streamline internal data operations.

Backend Developer Intern - Car Studıo AI (Istanbul Türkiye) July 2025 - October 2025

- **Java-Centric Architecture & DDD:** Contributed to a robust backend ecosystem using Spring Boot, adhering to DDD principles to ensure a decoupled and maintainable codebase.
- **RESTful API & Communication:** Designed and optimized **REST APIs** for seamless front-to-back communication, ensuring high performance and scalability under heavy loads
- **Image Processing & Asset Ingestion:** Assisted in engineering server-side data workflows **for high-resolution automotive imagery**, optimizing asset storage and ingestion pipelines.

TECHNICAL SKILLS

- PROGRAMMING LANGUAGES: TypeScript, JavaScript, Java (21)
- FRAMEWORKS & TOOLS: NestJS, Next.js, React, Node.js, Spring Boot, Nuxt 3
- DATABASES & CACHING: PostgreSQL, Redis, Hibernate, MongoDB, Mongosee. ,MySQL
- ARCHITECTURE & MESSAGING: Event-Driven Architecture, RESTful APIs , Apache Kafka , WebSocket
- TESTING & METHODOLOGIES: Domain-Driven Design (DDD), TDD, Unit Testing, BDD
- AI & WORKFLOWS: LLM Tool Calling, AI Agents, ComfyUI, LTX Studio
- CLOUD & DEVOPS: Docker, Git (GitHub, GitLab), AWS Google Cloud

EDUCATION

Bachelor Degree - Sakarya University (Sakarya,Türkiye) October 2022 - July 2027

Finance
